

RAPIDCYCLE

Newsletter

October 11, 2007

Welcome to our first issue of the Rapid Cycle Newsletter. A lot of things have been happening lately so let's get right to the news.

Rapid Cycle has received the new Scorpion EXO-1000 helmets! We have been waiting since last winter for these and they are worth the wait. One of the great new features is a inner visor just like on the military pilot helmets. The inner visor is shaded and can be moved up and down independently of the regular visor – it is like having sunglasses built into the helmet. Another cool feature is that the pads inside the helmet can be “pumped up” with air. This means the helmet can be easily slipped on and then inflated to fit perfectly against any shaped head. You can now achieve the perfect fit from your motorcycle helmet!

If you have a new helmet but you don't have a new bike to ride, Rapid Cycle can help with that too. We have several new and used bikes in at specials prices – up to \$1000 off! We have several used Hyosung cruisers and a couple of new sport bikes that are last years models. For example, we have a NEW silver 05 GT650S that is a great looking bike. We also have a couple of the red GT650R models, in both 05 and 06 models – new with warranty. Call the store for details on how you could pick up one of these bikes for up to \$1000 off the regular price.

We ran a couple of Hyosung sport bikes on a dyno to see what performance enhancements we could make. We ran a stock bike, a re-jetted bike, and a bike with a performance air filter, a Yosh exhaust, plus it was re-jetted. The results were surprising. All of the bikes ran lean and could definitely put out additional HP if re-jetted. This was surprising because most machines are set at the factory for sea level mixture and when brought up to SLC elevation, they run rich. But in the case of the Hyosung machines, they all ran lean so re-jetting would help a lot. In fact, if you change your air filter or change your exhaust, we strongly recommend re-jetting the bike. Even if the bike is stock, re-jetting would help get more horsepower from the bike. We have a set of performance add-ons for the Hyosung machines that include a modified air filter, a Yoshimura muffler, and re-jetting at a special price. Call the store for details, 466-6051.

Speaking of mods for the Hyosung bikes, we have the block off kits for the AIS – the air injection system. These block off kits eliminate the deceleration backfires that a few of you have complained about. The kits themselves are about \$25 and we can install them for you.

For you dirt bike guys, we have a bunch of dirt bike parts and accessories priced at 50% off. Also on sale is all the dirt apparel, including jerseys, pants, protection, and gloves.

**50%
OFF**

On the Hyosung machines, we can now offer an extended warranty. It is not through Hyosung but this warranty covers the same items. It is reasonably priced and will cover manufactures defects up to 6 years. It is through a well-known, national company called Aftercare. The coverage starts at \$375 to extend your existing warranty another 2 years – four years total! The coverage is good here at Rapid Cycle, as well as thousands of dealers nation wide.

The big news is that Scorpion now has a full line of apparel! They make great helmets and Rapid Cycle has always recommended the Scorpion products. Now we are proud to carry their riding jackets, gloves, and accessories. Scorpion waited a while to get into the apparel products and they did not waste their time. They did their homework by studying other brands of clothing and then figuring out how to make it better before creating their new stuff. They have several models of jackets and they are all made very well plus have great features.

Scorpion Sports has coined two ExoWear safety features worth noting. The Exo-Tec CE armor affixed in the elbows and shoulders of their jackets, is both malleable and perforated. The ventilated armor system is exclusive to Scorpion in the motorized, two-wheel world. Secondly, their Exo-Stitch Safety Seam process of sewing, folding and double stitching is used on all of the exposed seams of Scorpion's jackets. This offers seam security in the brutal fight against road rash! Aside from these bits of specificity, Scorpion will continue to use the KwikWick moisture-absorbing liners that are trademarked in their helmets in the removable, and interchangeable, thermal and waterproof liners for the gear.

Feel free to give us a call if you have any questions – or of course, drop by anytime between 9am and 6pm during the week. Our winter hours include a change on Saturday – we are open till just 4pm.

Remember we offer winter storage for your bike for only \$29.95 per month. Your bike will be kept in our heated and secure shop for the winter and yet it will be available during the winter if you want to ride it.

Rapid Cycle – 446-6051.
